

Vanguard Analyzer™

Vanguard Analyzer is an advanced security analysis solution for conducting z/OS and RACF® integrity verification and audit assessments.

Highlights

- Significantly reduces the time and costs of conducting a system audit**
- Improves the quality and consistency of the system assessment**
- Allows management to show 'due diligence,' demonstrating regulatory compliance and audit readiness**
- Performs a Self-Assessment before Auditors do theirs**
- Ensures expert level audit results**
- Reduces the number of manual tasks in an assessment**
- Delivers the needed information to the correct people quickly via email**

Vanguard Analyzer delivers expert-level integrity verification and audit results in minutes, giving the security analyst valuable information and insight into important z/OS and RACF site implementation vulnerabilities. Assessment findings are presented in their order of importance, and include detailed explanations, risk identification, and recommended corrective action, all in simple business language.

System Auditing Made Easy

Analyzer runs thousands of integrity checks, automating the manual tasks associated with the audit process. Specific tests can be run individually, or a system overview report can be selected to indicate those areas with the most severe findings across the entire system.

Regulatory Compliance

Exposing and eliminating vulnerabilities in security implementations is the first step to a successful regulatory compliance program. Analyzer exposes hidden risks and provides a remediation cookbook to implement stronger security processes. Plus, Analyzer cuts so much time out of the process that system assessments can be run more frequently. With Analyzer, preparing for outsider auditors has never been easier.

Expert Knowledge Base

SmartAssist™ gives security analysts expert assistance in the interpretation of Analyzer's assessment findings. By drilling down from a specific finding, SmartAssist presents a detailed explanation, a risk statement that is easy to understand, and a corrective action that is easy to follow.

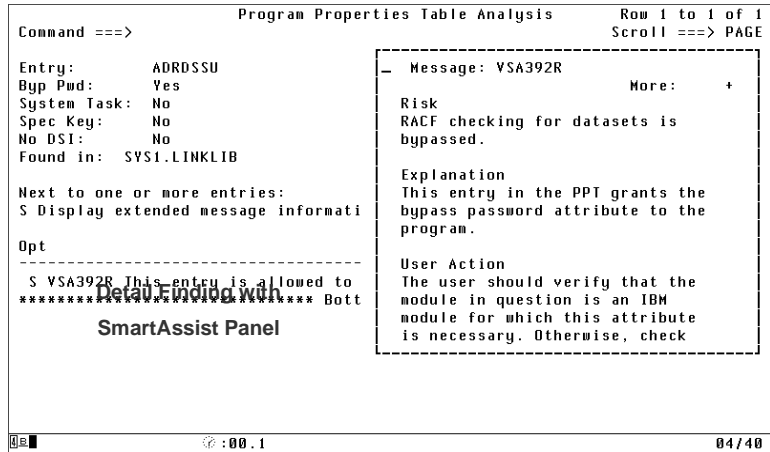

SmartAssist is an invaluable tool for creating a practical remediation plan.

System Integrity Verification and Audit Assessment

- Provide an in-depth overview of the current system status, identify exposures in simple business risk language, and prioritize them for immediate action
- Perform an entire z/OS system audit that includes RACF with a single selection or perform specific individual audit functions
- Display audit results online or in a printed batch report. Reports can be distributed in PDF format and via email
- Quickly deliver the needed information to the correct people
- Rank messages by importance so they can be addressed quickly and appropriately
- Mark findings that have been reviewed and accepted so that future reports will highlight new findings and duplicate review of known issues will be avoided

Saves Time and Improves Best Practice

- Identify security vulnerabilities
- Perform Self-Assessments before the Auditors
- Record and measure vulnerabilities, and demonstrate regulatory compliance and audit readiness
- Conduct technical system audits without a systems programmer background
- Significantly reduce the time and costs of conducting a system audit

SmartLink™

When used together, Vanguard Administrator, Analyzer and Advisor provide an integrated security management workbench environment that delivers a whole new level of effectiveness to security practitioners.

Users looking at an Analyzer audit report, can switch seamlessly to Advisor to check related event activity, then to Administrator to fix a problem found, and then back to the Analyzer report.

Vanguard's proprietary SmartLink technology enables this natural workflow, linking the context from one product to the corresponding context in another. There is no wasted motion in navigation or re-entering data.
