Twenty Year IBM Veteran Robert Ubert Joins Vanguard Professional Services Team

*Vanguard Team Offers Unparalleled Depth and Expertise in
Mainframe and Multi-Platform Enterprise Security Systems*

LAS VEGAS – October 28, 2008 – Vanguard Integrity Professionals, Inc., a leading global provider of enterprise security software, announced today that Robert Ubert, a 20-year veteran of IBM specializing in IBM Security Server (RACF®) with over 30 years mainframe experience, has joined its highly regarded Professional Services team.

“Bob will be a core member of Vanguard’s Professional Services team providing RACF security assessments and remediation, migration assessment and migration services,” said Scott L. Mitchell, Director, Vanguard Professional Services. “His role will also include SDSF assessments and DB2 to RACF migration. In addition Bob will provide training to customers attending Vanguard Product and RACF education courses both at Vanguard’s training center located in Las Vegas, Nevada and at customer locations.”

Beginning his career at IBM in the Heartland Services Center, Ubert served as a consultant on projects ranging from system programming in the VM and MVS areas to coding a major assembler Object Access Method application. In 1993, he transferred to IBM’s Education Company as an instructor in the security (RACF) and storage curriculum. In 2005, Ubert joined IBM’s Software Migration Project

Office (SMPO) where he helped customers migrate to RACF and also provided technical sales support for Vanguard and zSecure products.

"I am thrilled to be joining the Vanguard team," said Ubert. "Throughout my time at IBM, Vanguard has always been recognized as the premier Software Vendor and Consulting firm on all issues concerning RACF."

Vanguard's Professional Services Consulting Group is recognized as the industry leader in consulting services for RACF, z/OS and Vanguard security products. With unparalleled depth in mainframe and enterprise technologies, Vanguard's consultants enable organizations to better manage their complex security and regulatory compliance issues by providing expertise in security administration, audit and compliance, multi-platform access management, and intrusion detection.

By leveraging the strength and reliability of IBM Security Server (RACF®) for mainframe computers along with Vanguard's comprehensive suite of security solutions, organizations can implement a highly secure environment across heterogeneous networks throughout the enterprise.
