## **Vanguard Integrity Professionals announces support of Security Information and Event Management (SIEM)**

***The need for early detection of targeted attacks and data breaches is driving the requirement for SIEM support.***

LAS VEGAS – July 06, 2016 – Vanguard Integrity Professionals is pleased to announce the launch and immediate availability of SIEM support across its enterprise-wide cybersecurity software solutions suite. SIEM is an approach to security management that seeks to provide a holistic view of an organization's information technology security. The SIEM requirement is driven by customer needs to apply security analytics to event data in real time for the early detection of targeted attacks and data breaches and to collect, store, analyze and report on log data for incident response, forensics and regulatory compliance.

Vanguard's new Active Alerts™ offering provides the ability to continuously monitor security related events at the system and or user-specified level. When an event occurs Vanguard Active Alerts will notify the SIEM in order for enterprises to take decisive action and make critical business decisions.

"Vanguard is dedicated to continual improvement of our products and solutions especially when the risk to critical systems is so great for our customers around the globe," said Brian Caskey, chief marketing officer at Vanguard. "We have added SIEM support to an already high-performance solution. With the launch of SIEM support, we continue to prove our commitment to our customers and the security of their Enterprise, z/OS® Security Server and Cloud infrastructures by providing the most advanced suite of security solutions available." SIEM is supported across the Vanguard enterprise security software suite, through our Active Alerts solution. Today we support ArcSight®, CorreLog and Splunk® offerings along with any other SIEM capable of consuming SYSLOG formatted messages.

The SIEM provides a holistic, unified view into not only the infrastructure but also workflow, compliance and log management. SIEM can provide a multitude of capabilities and services efficiently.

At the core, SIEM provides, Data Aggregation, Correlation, Alerting, Dashboards, Compliance, Retention and Forensic Analysis.

## **Key Takeaways**

- Vanguard supports SIEM within the Active Alerts solution.
- Vanguard supports ArcSight, Correlog and Splunk today.
- Vanguard can work with any other SIEM capable of consuming SYSLOG formatted messages.

For a complete description of all enhancements included with Vanguard SIEM, visit [www.go2vanguard.com](http://www.go2vanguard.com). Current customers with an existing maintenance contract can download the latest version of the Vanguard Software from the Vanguard Customer Zone immediately. New customers will automatically receive the latest version of software.
