VANGUARD INTEGRITY PROFESSIONALS ANNOUNCE WEBINAR

Leading Cybersecurity Experts to host IBM Systems Magazine Webinar Vanguard Security Assessments – Ensure Your Critical Assets Are Protected

LAS VEGAS, NEVADA – February 28, 2017 – [Vanguard Integrity Professionals](#) cybersecurity experts with cybersecurity solutions securing any enterprise, announces the date and time of an IBM Systems Magazine webinar entitled Vanguard Security Assessments – Ensure Your Critical Assets Are Protected! The Vanguard Webinar will be hosted on Wednesday, March 15, 2017 12:00 p.m. CDT.

The hour-long webinar will feature Brian Caskey, chief marketing officer and Mark VanWormer, Vice President – Corporate Operations. Vanguard’s executives will discuss the steps required to ensure your critical corporate assets are protected.

Not only are mainframe environments vulnerable to internal malicious users, but also to external hackers, criminals and competitors. To ensure critical assets are properly protected, organizations should perform regular mainframe security assessments.

Join the Vanguard webinar and learn how you can:

- Prevent security breaches and other risks.
- Protect critical customer and corporate data and applications.
- Reduce risk by implementing security policies and procedures.
- Increase efficiencies in managing and auditing mainframe systems.
- Enhance productivity, decrease downtime and align security resources.

Today’s mainframe is just another server in the data center, accessible internally and externally like every Windows, Unix, Linux or other server.

Vanguard Professional Services team conduct Vanguard Security Assessments to quickly identify and prioritize mainframe penetration risks, determine whether the implementation reflects best practices for security and integrity, and evaluate the potential impact and exposure of any findings on an organization’s operations and reputation, e.g., failing audits, losing revenue or violating privacy protections.
