

Utilities (Analyzer)

Vanguard Analyzer is security software for expert level, vulnerability assessments of security controls and settings with the ability to produce fast system snapshots and audit results in literally minutes. Vanguard is the choice of utilities globally in eliminating vulnerabilities in large enterprise implementations to help assure Regulatory Compliance.

HACKERS ARE INCREASINGLY TARGETING CRITICAL INFRASTRUCTURE

Verizon's recent security report from March 2016 indicates that Syrian hackers infiltrated an undisclosed water utility's control system and changed the chemical levels being used to treat tap water and made off with the personal information of over 2.5 million customers in the process. The breach transpired because the criminals were able to steal logon credentials for the utility's AS/400 mainframe that were stored on a front-end web server.

In 2011, hackers destroyed a pump used by an Illinois water utility after gaining access to the industrial control system it used to operate its machinery. This hack, like the one above, was also due to stolen user names and passwords and traced to cyber criminals in Russia.

On December 23, 2015, the Ukrainian Kyivoblenergo, a regional electricity distribution company, reported service outages to 225,000 customers. The outages were caused by illegal entry into the company's computer and SCADA systems and disconnecting substations. Keystroke loggers were used as part of the attack to steal system credentials. The full technical analysis of the attack by SANS Industrial Control Systems and NERC E-ISAC can be accessed here:

http://ics.sans.org/media/E-ISAC_SANS_Ukraine_DUC_5.pdf

With regard to the Ukraine hack, DHS undersecretary for the National Protection and Programs Directorate (NPPD) Suzanne Spaulding says she hopes the NERC & SANS report will be a reality-check for US critical infrastructure owners. "I want ... [executives to say], 'what are we doing about this?'" to prevent similar attacks, she said during a February 2016 interview.

WHAT SHOULD UTILITIES DO TO PREVENT HARMFUL AND EXPENSIVE BREACHES?

Given critical infrastructure and utility providers often rely on mainframes for their day to day business- firms should place the same degree of emphasis on their mainframe security controls as they do on the mission critical applications and business processes that run on them. With this in mind, VANGUARD ANALYZER is the choice of over 1,000 of the world's largest banks, insurers, and branches of government, utilities and retailers for this purpose.

VANGUARD ANALYZER SOFTWARE

Ensuring your mission critical systems, applications and business processes are secure

VANGUARD ANALYZER delivers expert level vulnerability assessments and audit results in minutes, leveraging Vanguard's extensive knowledge of security best practices. If there are security issues where you are at risk, findings are ranked and presented in order of importance so they may be expeditiously addressed. The corrective actions security personnel need to take to rectify identified vulnerabilities are also plainly laid out in simple language thanks to Vanguard's proprietary Smart Assist® technology, simplifying and streamlining the corrective action process.

Comprehensive system auditing made easy with VANGUARD ANALYZER

Vanguard Analyzer runs thousands of integrity checks automatically, eliminating the multitudinous manual tasks associated with the audit process. Specific tests can be run individually, or a system overview report can be selected. VANGUARD ANALYZER cuts so much time out of these processes that checks and

assessments can be conducted much more frequently. The obvious benefit being that you're constantly current on exactly where you stand and ready for external auditors.

Analyzer: Comprehensive System Auditing made easy

Exposing and eliminating vulnerabilities in security implementations happens to be the first step to a successful regulatory compliance program. VANGUARD ANALYZER can help you illustrate due diligence and stay in compliance with data and infrastructure security mandates like HIPAA, PCI DSS & FISMA.

Utilities (Analyzer)

The ability to decentralize security administration

Vanguard Administrator utilizes Vanguard patented technology, allowing you to decentralize portions of your security administration and reporting workload. This sophisticated and patented technology limits user control and data displays to the end user to whom you have decentralized administration related duties.

Administrator lets you assign password administration to outside departments (such as an IT Help Desk) that would not otherwise have Security Server authority. This allows part of the routine maintenance to be passed on to others, freeing IT security personnel to focus on other more critical tasks.

Administrator permits Help Desk personnel to change passwords, revoke a user ID, and resume a user ID. Such capabilities would only apply to users or groups for whom the Help Desk administrator has direct responsibility or authority - all controlled by Administrator.

Manage Digital Certificate Information

The digital information controlled by the Security Server (RACF) can also be fully managed using Administrator. These capabilities, introduced in the latest software release version 2.2, enable users to create new digital certificates, delete them, prepare requests for certificates to be signed by certificate authorities, import new signed certificates, renew existing certificates and can also add and delete certificates from digital certificate rings. These management functions can be used along with Administrator's selective digital certificate reporting capabilities for maximized efficiency and ease-of-use.

Sophisticated Reporting

Administrator can also produce both Batch and Online Reports - on users, groups, data sets and general resources.

Why Vanguard to Secure Your Enterprise?

Almost half of the Fortune 1000 companies in the world spanning banking, retail, insurance, as well as numerous government agencies trust Vanguard with their enterprise security.

About Vanguard Security Solutions

Vanguard offers the most advanced and integrated portfolio of enterprise security products and services in the world. The portfolio was the first to offer fully automated baseline configuration scanner for Mainframe DISA STIGs— the Gold Standard for Security.
